

ABSTRACT

A business card reader (BCR) with a replaceable cradle, particularly to a BCR combined with a cradle, in which the cradle is replaceable for adapting to various digital electrical equipments, 5 comprises a charging cradle and a base assembled under the charging cradle. The cradle has a connector mounted thereon and a flat cable connected with the connector. The base has a scanning unit, a paper-feeding seat disposed before the scanning unit and a printed circuit board (PCB) adjacent the paper-input seat, wherein the PCB has a socket 10 mounted thereon for receiving an end of the flexible cable therein.
